

# What's the plan?

**The National Feral Pig Action Plan 2021-2031 provides the national coordinated framework to bring everyone together to reduce impacts caused by feral pig populations across Australia.**

Community engagement, collaboration and coordination are key to achieving long term reductions in feral pig impacts and their populations.

## Goals of the Plan

1. Effective leadership, coordinated partnerships and strong governance
2. Community engagement and education
3. Increased adoption of best practice methods and systems by land managers

## Strategic and integrated use of our tools – there's no “one fits all” solution:

- Baiting (1080 and/or HOGGONE)
- Aerial shooting
- Trapping
- Ground shooting
- Exclusion fencing

## Making the difference:

**It's all about people: partnerships, engagement, capabilities and networks**

- Having measurable management strategies in place
- Sharing learnings between management groups, supported by our network of demonstration sites
- Overcoming short term program duration and resourcing constraints
- Capturing and using data and information to engage and motivate land managers in local activities
- Applying technology and science-based information effectively to inform management strategies and increase knowledge of outcomes on changes to assets being protected and/or feral pig populations
- Quantifying and communicating benefits being achieved from management actions to all stakeholders, including the general public
- Striving to deliver long term reductions in feral pig impacts

**Landscape based, cross tenure control programs**

**Coordinated groups of land managers working together in partnership**

**Strategically and effectively applying humane, integrated best practice feral pig management**

**Outcomes achieved are monitored, evaluated and programs adapted**
