Commonly asked questions about FeralPigScan

1. Why should I record information about local feral pig activity?

Recording and mapping information about feral pigs in your local area can help you and your community by:
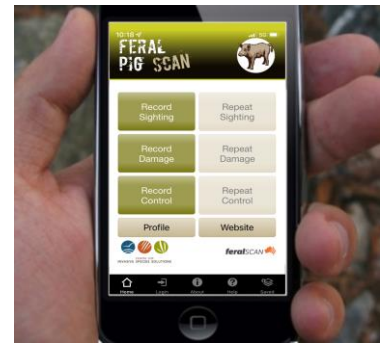

- Identifying areas for control
- Seeking stakeholder support, including from Governments
- Using data in funding proposals and reports

- Monitoring outcomes of impact and/or population reduction programs
- Accessing and sharing resources to reduce damage caused by feral pigs

## 2. What information can I record about feral pigs in my area?

You can record feral pig sightings, evidence of their presence, damage that they cause, photos and management techniques used.

Heat map of records

3. How is my information kept private and secure?

- FeralScan manages feral pig data very privately and securely.
- The GPS coordinates (and precise details) of information you record is <u>not visible</u> to the general public.
- The map cannot be zoomed in.

- Your contact details, property name, location, and photos are never visible to the public.
- The precise information that you record can only be seen by you and members of your private community group (if relevant).

4. Do I need a Login to record information about feral pig activity?

No, you do not need to Login to FeralPigScan, but you need to enter an email address when recording information without a Login.

5. What are the advantages of Registering and Logging in?

- You can view all your own entries on a map.
- You can decide who to share information of your entries with.
- You can share information with your private group (if relevant),
- You can receive Alerts to keep you informed about feral pig activity in your area.
- You can receive better support from the FeralScan Coordinator.

Private Groups in FeralPigScan

- You can create a 'private group' to establish a 'community / local area map' of feral pig activity that only members can view.
- Only people you know, or invite, can be part of your private group.
- The community map can help you view information recorded by others in your group, and coordinate control efforts such as pre-feeding, baiting and/or trapping to get the best results.
- Stay informed when people in your group record feral pigs nearby, e.g., "10 pigs seen by Margaret today"
- Alert nominated people in your group, including neighbours or biosecurity authorities when you see feral pigs or when you are successful with control, e.g., "10 pigs trapped & destroyed"
